

"Not to mention the fact that the skyrocketing cost of health care in this country would dwindle considerably. Perhaps not right away, but in time as more and more health care become individualized and digitalized." Dan adds to Tom's argument. He waits a beat to see if there are any other comments or objections before going back to his list. "We are going to be creating packaged kits, with everything included. These kits must be user-friendly. And by that, I mean idiot proof. At this point it looks like each NeurFX kit will contain either a BCI headset-tablet combo or a BCI-IVR headset combo.

"And all the kits will be offered free to those who NEED them." Dan looks up and makes eye-contact with all the doctors in the room. "This is the most important thing. We have just lived through a world-wide Pandemic and our government's response was unhesitant and correct. First, provide care to anyone to succumbs to CoVid-19 with the best treatment available. Then get the people vaccinated. Everyone. No expense was spared and no one had to pay out of pocket. We would not be sitting here today without masks if the government hadn't acted so fast and so unerringly to stop the spread of the virus and prevent more outbreaks. Well," he shakes his head, "if our government can do that for one virus, surely it can step forward and do the same for the neurological and pathological conditions that plague, not everyone, but an ever-growing percentage of the citizens of this country."

Dr. Griffin speaks up. "You aren't going to get any argument from me. I think the lesson Covid taught us is that, when health care really matters, it has to be free. If there had been any exceptions, any insurance loopholes to jump through, the vaccination program would have died in its tracks and, we would all be meeting on Zoom today. I can't imagine how many more needless deaths would have occurred in this country."
